

Student Name: Aman

Subject: Biology

Question 1: What is photosynthesis?

My Answer: Photosynthesis is how plants make their own food. They use sunlight to turn stuff from the air and the ground into energy so they can grow. It's why plants need the sun to live.

Question 2: What is the primary function of the mitochondria in an animal cell?

My Answer: The mitochondria is the powerhouse of the cell. It's where all the energy for the cell gets made. Without it, the cell wouldn't have any power to do its job.
